Light snow showers (night)	Light snow showers	Sleet showers	Light rain	Light rain	Light rain
Precipitation probability					
50%	50%	40%	30%	30%	60%

Forecast for Wednesday 17 Nov 2021

Weather: Occasional showers will continue to spread east across all ranges, blown in on strong to gale force winds. A few bright or sunny breaks likely inbetween, especially for the Cairngorms. Showers falling as snow to 500-600m initially, but slowly rising to munro level by midday. Showers tending to fade through evening ahead of thicker cloud and periods of rain and drizzle spreading northeast.

Chance of cloud free mountain/hill tops above 800m: 60%, falling 10% through evening.

Visibility: Showers will often bring cloud down to 600-800m so visibility will be variable and fast changing above this level due to cloud and snowfall. Neighbouring slopes likely obscured by rain below this, but only for 15-30 minutes at a time. Cloud becoming increasingly extensive above 400-500m through evening.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

A few centimetres of fresh snow is likely to build up through morning, especially on west facing slopes.

Forecast for Thursday 18 Nov 2021

Weather: A stark return to mild conditions as thick cloud and moist air spreads in from the west. Persistent strong to gale force winds and extensive low cloud will be significant hazards. Any lying snow will quickly melt as rain and drizzle set in, but this will be mainly light. Best shelter across northern foothills of the Cairngorms.

Maximum wind: West 30-35mph gusting 50mph, easing a little through the day. Winds reaching 60mph across the Cairngorm Plateau through morning.

Chance of cloud free mountain/hill tops above 800m: Virtually no chance.

Visibility: Cloud will be extensive and persistent above 400-500m, perhaps lower at times. Rain will turn lower slopes hazy. Little change expected through the day.

Temperature: **Glens:** Plus 12 Celsius.
At 800m: Around plus 7 Celsius.
Freezing level: Well above summits.
